EDUCATION

University of Florida

*Bachelor of Science, Major in Computer Science/Minor in Math
College of Liberal Arts and Sciences*

Gainesville, Florida

May 2024

Cumulative GPA: 3.83/4.00

EXPERIENCE

Implementation Engineer

Novaprime — Sep 2025 – Dec 2025

Javascript, JSON, Excel

- ❑ Collaborated directly with the CEO to develop and maintain a JSON-based in-house rules engine for automated mortgage document validation and compliance checks
- ❑ Translated customer requirements into structured validation logic, enabling scalable and customizable rule configurations
- ❑ Labeled and curated mortgage document datasets to support machine learning models for document classification and splitting

Software Engineer (Promoted from Junior Software Engineer)

FlexShopper — July 2024 – Aug 2025

Node.js, React, TypeScript, MongoDB, MySQL, Redis, RabbitMQ, AWS

- ❑ Co-led architecture and development of a new system, driving design decisions and coordinating implementation across a team
- ❑ Designed and implemented a new data schema and database gateway to support a MongoDB → MySQL migration, improving data structure and maintainability
- ❑ Built a business-facing interface enabling non-technical users to safely execute MySQL updates, reducing engineering dependency
- ❑ Improved backend performance by 917% by implementing Redis caching for high-frequency MongoDB queries
- ❑ Developed event-driven microservices using RabbitMQ for user analytics and email automation workflows
- ❑ Configured CI/CD pipelines with GitHub Actions and integrated monitoring via New Relic to track deployment health and system performance
- ❑ Collaborated with the CTO and external vendors to resolve a critical production incident impacting revenue

Software Engineering Intern

Infotech — May 2023 – Aug 2023

Ruby on Rails, SQL, Docker, RSpec, Jasmine

- ❑ Enhanced document search functionality by adding error-detection attributes, improving data visibility and user experience
- ❑ Migrated 7M+ records from plain text to rich text, improving readability and consistency across the platform
- ❑ Wrote unit and integration tests using RSpec and Jasmine to ensure reliability of newly developed features

Teaching Assistant — Algorithms & Data Structures

University of Florida — Jan 2023 – May 2023

C++, Java

- ❑ Taught algorithm design concepts (graphs, dynamic programming, greedy algorithms) to 100+ students
- ❑ Evaluated 300+ algorithmic solutions based on correctness and time/space complexity

PROJECTS

AI Image Identifier - Python, Flask, Streamlit, TensorFlow

February 2024-April 2024

- ❑ Trained a **Convolution Neural Network (CNN)** on **140k** real/AI-generated faces and **170k** general real/fake images with a validation accuracy of 98.09%
- ❑ Applied the model for **binary image classification** to label test images as real or AI with a certainty score
- ❑ Deployed the model with a split frontend/backend using **Streamlit** to handle accepting images and displaying the score and **Flask** for saving the image and using the model to predict the corresponding score

TECHNICAL SKILLS

Languages: C++, Python, Java, SQL, JavaScript/TypeScript, Ruby, Ruby on Rails, HTML, CSS

Frameworks/Tools: Agile, Jira, Git, Docker, RESTful API, MongoDB., Amazon Web Services, Node.js, React
